WORK EXPERIENCE

Mainframe Operator — Kyndryl, Bangalore [June 2021 - Present]

- Proactively monitored system performance and executed scheduled jobs using CA7, Omegamon and OPCA.
- Created and scheduled batch jobs using TWS following established procedures and job dependencies to ensure smooth execution of critical business processes. Conducted MQ and CICS recycling.
- Developed and maintained application workflows within TWS, incorporating job dependencies, scheduling requirements, and optimizing for resource constraints.

PROJECTS

Entertainment Web Application - React JS, Redux, CSS3, API [Live URL](#)

- Built an entertainment application that allows users to view a TV series and movies across various categories. Users get personalized suggestions based on their current choices. Plus, there's an advanced search bar for effortlessly finding specific titles.

REST Countries API with Color theme switcher — JavaScript, CSS3, API [Live URL](#)

- Developed an country details app where users can effortlessly view all countries listed from the API directly on the homepage, search for a specific country using an input field, and filter countries by region. Clicking on a country reveals more detailed information, while also providing the option to navigate to its border countries.
